EDUCATION

University of Washington - Seattle

Sep. 2023 - Jun. 2027

Bachelor of Science in Informatics

GPA: 3.95/4.0

- **Relevant Coursework:** Co-op Software Development, Server-Side & Client-Side Development, Data Structures and Algorithms, Databases & Data Modeling, Artificial Intelligence, Mobile Development: iOS

EXPERIENCE

Software Engineer Intern

Jun. 2026 – Sep. 2026

Amazon Web Services (AWS)

Seattle, WA

- Incoming intern for the AWS IoT Core team

Software Developer

Sep. 2025 - Dec. 2025

ReThink @ UW

University of Washington

- Automated client communication workflows by integrating EmailJS into the React frontend, reducing manual administrative processing time by 5+ hours weekly via asynchronous event handling.
- Engineered a location-based directory system using Google Maps API and Firebase, optimizing database query retrieval to render 100+ sustainable restaurant locations with sub-second latency.

Coding Instructor

Jun. 2025 – Oct. 2025

Coding With Kids

Seattle, WA

- Taught foundational programming concepts in Java, Python, C++, and Scratch to 20+ K-12 students, tailored instruction by age group and skill level.
- Facilitated academic support for 100+ students through coding exercises, adapting lesson plans to individual learning speeds by offering debugging assistance, and fostering logical problem-solving skills.

PROJECTS

PeaceHealth Capstone | *Next.js, Supabase, Tailwind CSS, Vercel*

Jan. 2026 – Present

- Architected a dynamic diagnostic questionnaire in Next.js, implementing complex state management to handle interactive quiz logic, progress tracking, and robust input validation.
- Designed a relational database schema using Supabase to manage secure user authentication and store highly dimensional daily health check-in data, deployed via Vercel.

AwareAI | *WINFO Hackathon (Best Implementation) — Manifest V3, JavaScript, Firestore REST*

Jan. 2026

- Developed a Chrome extension that estimates AI water usage per prompt using per-platform input capture (ChatGPT, Gemini, Claude), displaying real-time usage to drive daily behavior awareness.
- Implemented anonymous local persistence and aggregation plumbing by syncing per-prompt usage to Firestore via a background service worker (REST API), enabling both individual tracking (daily vs all-time) and global pooling to support cross-user environmental impact reporting.

Zero-Touch Commute Assistant | *DubHacks — React, Node.js, AWS (Lambda, Bedrock)*

Oct. 2025

- Engineered a Serverless application orchestrating Google Calendar API integrations to automate schedule parsing, reducing manual planning overhead by 15% via intelligent cron jobs.
- Architected an Event-Driven system on AWS (Lambda, EventBridge, DynamoDB), leveraging Generative AI (Bedrock) for semantic event classification and OneBusAway for real-time transit data ingestion.

SKILLS

Programming Languages: TypeScript, Python, C++, Java, JavaScript, SQL, Swift, R, HTML/CSS

Frameworks & Libraries: Node.js, AWS, React, Express.js, Firebase, Azure, MongoDB, PostgreSQL

Developer Tools: Git, VS Code, IntelliJ, RStudio, Postman, DevOps, Agile, Figma, Miro

Concepts: Full-Stack Development, REST APIs, Responsive Web Design, Database Management, Graph Algorithms, Software Development Life Cycle (SDLC), MVC Architecture, User Authentication, State Management
